

Method name	Front/Back	Params	Returns	Description
jsonRead	Front	void	JSON object	Reads from STDIN to gather and return a JSON object
batch	Front	JSON object	list of list	Splits the JSON values into lists of 10 and returns a list of these lists. If the number of JSON values is not divisible by 10, the last list is populated with nulls to make it of size 10.
send	Front	list of list	void	For each list in the list of lists, send the list over to the backend for sorting and then print out the sorted list
sort	Back	list	list	Takes in a list and returns that list in sorted order
